INERTIA / MVP ARCHITECTURE

Knowledge into accountable work

Logical architecture and verified scope, October 29. A source diagram does not establish current deployment or final application approval.

People and objectives

Own account, current organization access and exact final decisions. No agent impersonates human authority.

Member knowledge

Existing shared corpus and scoped search/read; source, passage and hash attribution remain explicit.

VPS access boundary

Cloudflare Access + tunnel and application auth. Durable stores. No Caddy layer.

↓

GENERAL COORDINATOR

Rank active saved opportunities; delegate, monitor and return useful work across the organization.

↓ ↓ ↓

Alpha / discovery

Retain candidates and source frontier. Reuse saved evidence. Full 1,475-record coverage is not tomorrow's MVP gate.

Parallel Beta / cases

Research, propose, save and correct. Thirteen case tasks and four overlapping providers observed. Preserve useful partial work.

Charlie / independent review

Exact source and artifact versions. Rejection returns correction. FUTO 393f is source acceptance, not final packet approval.

Separate durable ownership

Paperclip: tasks/reviews/run history. DFW: funding evidence/cases. Member app: organization sources and shares. Scoped readers connect them.

Readable proposed work -> human decision

Organization-grounded writing and artifact readback observed. Human accepted FUTO sample quality; current submission remains manual.

DEFERRED FROM THIS MVP

Real Paperclip-Buzz loop | Gemini notes import/triage | Durable exhaustion/new-evidence revisit

Source, release tag, deployed image, source approval and application approval are separate evidence.
